## TECHNICAL SKILLS

**Certifications:** Certified Kubernetes Application Developer (CKAD)

**Languages:** Go, Python, Javascript, Java, SQL, C#, C

**Frameworks:** React, Pytorch, .NET, Node.js, Flask, MongoDB, Ruby on Rails

**Developer Tools:** Kubernetes, Docker, Amazon Web Services, Azure Cloud Services, Google Cloud Platform, Git

## EXPERIENCE

### Associate Software Engineer

*Capital One*

August 2025 – current

*Mclean, VA*

### Undergraduate Student Researcher

*PCVLab, The Ohio State University*

January 2024 – May 2025

*Columbus, OH*

- Innovated MotivNet, a deep learning model for facial emotion recognition that achieved performance within 10% of state-of-the-art AffectNet FER tasks through **ViT-MAE**-based feature extraction and **Attention**-based classification.
- Conducted guided research in a highly selective undergraduate research distinction program that culminated in a published thesis at OSU's Knowledge Bank, utilizing technologies such as **Pytorch**, **Weights & Biases**, and **Pandas**.
- Optimized computation by implementing distributed protocols with **SLURM**, resulting in a 43% reduction in training time.

### Software Engineering Intern

*Capital One*

June 2024 – August 2024

*Mclean, VA*

- Developed a **Kubernetes**-native controller in **Go** to mitigate cloud risk for 150+ **AWS EKS** clusters by surfacing and annotating **Docker** image vulnerabilities onto pods, accelerating the vulnerability remediation timeline by 50%.
- Designed a novel metric for an enterprise **New Relic** dashboard that identifies the vulnerability footprint of 22,500+ pods by generating vulnerability count histograms bucketed across 5 risk labels and exposing it via a **Prometheus** client.
- Optimized operator performance by at least 15% utilizing **AWS Lambda** for session management and templated operator deployment onto a CI/CD pipeline using **Jenkins** and **Helm**.

### Software Engineering Intern

*WillowTree*

May 2023 – August 2023

*Columbus, OH*

- Led the creation of an end-to-end MVP for a 24/7 customer support chatbot using the **React** framework, collaborating with a cross-functional team, and following **Agile** methodologies.
- Implemented a semantic search and response feature to enhance the customer experience by cutting down customer service response times by around 30% utilizing large language models, vector embeddings, and an **Azure MySQL** database.
- Deployed a custom back-end web API leveraging **Azure Cloud Services**, **.NET**, and **C#**.

### President and Co-founder

*The Cooking Club*

August 2022 – May 2025

*Columbus, OH*

- Drove the organizational strategy, resulting in 600+ member recruitment in the first year and currently managing all operational aspects including funding, events, and member coordination.
- Organize and lead bi-weekly cooking workshops to cultivate healthy habits and explore cultures through cuisine.

## EDUCATION

### Georgia Institute of Technology

*Masters of Science in Computer Science*

Atlanta, Georgia

*Spring 2026 - current*

### The Ohio State University

*Bachelor of Science in Computer Science Engineering, Minor in Business*

Honors Research Distinction in Civil Engineering

Columbus, OH

*Spring 2025*

GPA: 3.741/4.0

## PROJECTS

### Kubefs | *Go, Kubernetes, Docker, Helm*

May 2024 – current

- Published a CLI tool to **Homebrew** that automates fullstack application development, testing, & deployment onto **K8** clusters by utilizing **Go**, **Cobra**, **Docker**, and **Helm**, resulting in a 23% reduction in time-to-deploy.
- Integrated support for common frameworks including **Cassandra**, **Redis**, and **NextJS** to reduce operational overhead.

### Evolate | *Python, Pytorch, Scipy, Pandas, Numpy*

May 2023 – August 2023

- Engineered a data structure that autonomously switches between different data structures and search algorithms based on user behavioral patterns, resulting in a 11% performance boost in computation speed.
- Trained a custom **PyTorch Neural Network** to determine the optimal implementations based on behavioral metrics such as insertion and deletion frequencies, search predictions, and search randomness.
